Date: 20.02.2018

**Office Memorandum**

In recent months Delhi/N.C.R witnessed some unfortunate deaths because of dengue and other ailments in four reputed private hospitals. In each case, NPPA got complaints of overpricing and inflated bills from the relatives of deceased patients. NPPA, within its jurisdiction under Drug Prices Control Order, 2013 had asked for details of billing from these hospitals and analyzed the same in great detail. Data of one of the hospitals was put in public domain vide O.M. No 27(2)/ 2017-Div-III/NPPA Dated 15.12.2017. NPPA has received applications under RTI Act and some relatives of the patients have met Chairman, NPPA seeking action in the matter.

Subsequent to disclosure of data of one hospital which had not requested confidentiality, the other hospitals submitted data with a request that name of the hospital should not be put up in public domain. Since the analysis done by NPPA is a matter of public concern, it is being put up in public domain with the objective of removing information asymmetry between patients and the hospitals and for greater transparency in healthcare system in public interest. Honoring the confidentiality requested by the other three hospitals, name of the hospitals is not being disclosed.

2. The information submitted by the hospital has been analyzed and tabulated into following categories provided as Tables:

A. Scheduled Formulations based on National List of Essential Medicines, 2015 (Schedule I of DPCO, 2013) and under price control.

B. Non-scheduled Formulations (Not under price control and out of Schedule 1 of DPCO, 2013)

C. Consumables not listed as drugs (neither under price control and nor under Schedule 1 of DPCO, 2013)

D. Medical devices (neither under price control and nor under Schedule 1 of DPCO, 2013)

3. The summarized table showing the breakup of the total amount billed to the patients in terms of various components of the hospital charges has been found to be as follows:

Sl.	Particulars	Amount	%
	a	b	c
1	Scheduled formulations	2,84,295.71	4.10%
2	Non-scheduled formulations	17,79,898.66	25.67%
3	Non-scheduled devices#	1,05,525.00	1.52%
4	Consumables*	6,63,175.06	9.56%
5	Diagnostics services	10,78,792.00	15.56%
6	Cost of procedures	7,91,912.00	11.42%
7	Consultation & Medical Supervision	8,82,432.00	12.72%
8	Equipment charges	5,16,771.00	7.45%
9	Room rent	8,04,850.00	11.61%
10	Surgery	27,113.00	0.39%
11	Total	69,34,764.43	100.00%

# Non-scheduled devices include disposable syringes with or without needles, Catheter, I.V. Cannula, etc.

\*Consumables include: surgical masks, hand gloves, etc.

(a) The total cost on scheduled medicines used in the treatment is only 4.10 % as compared to 25.67% on non-scheduled formulations. It is amply clear that for claiming higher margins, doctors-hospitals preferred prescribing and dispensing non-scheduled branded medicines instead of scheduled medicines while scheduled medicines under NLEM are supposed to cover all essential medicines.

This also indicates that the drug variants of scheduled (essential under NLEM) launched by manufacturers in the name of 'new drugs' and 'fixed dose combinations' in order to come out of price control have become the preferred choice for manufacturing and medical fraternity thereby diluting the purpose of putting these drugs under essential category under NLEM where specification of dosage and forms(as essential) makes it easier for manufacturers to launch a different dose or form and come out of price control with an added benefit of permissible 10% annual increase in MRPs.

Under NLEM, 2015, NPPA has capped the prices of 871 essential drugs along with approval of retail prices of 642 drugs as 'new drugs' during the same period because of statutory provisions. This trend of migration from scheduled to non-scheduled category is reflected in the growth rate of NLEM and non NLEM drugs in the year 2017 where the rate of growth of non NLEM drugs is almost double the rate of NLEM drugs. This issue needs to be addressed through policy intervention.

(b) Institutional bulk purchase by private hospitals, which in most cases keep a pharmacy of its own, makes it easier for them to get very high profit margins and indulge into profiteering on drugs and devices even without need to violate the MRPs which is already enough inflated. Industry, in order to get bulk supply orders is in a way 'forced' to print higher MRPs as per the 'market requirements'. This is a clear case of market distortion where manufacturers after accounting for their profits print inflated MRPs to meet out the demands of a distorted trade channel without getting any benefits from this 'artificial inflation' and patients have to incur huge out of pocket expenditure in hospitalization cases and also otherwise where they are not allowed to buy drugs from outside or go by the physician's branded prescription.

It is to be noted that trade margins after selling it to stockists does not become part of the balance sheet of the manufacturers or importers and this is how present pricing system based on averaging of price to retailers (PTRs) rarely hurts the industry margins. The PTR based averaging method leaves even price control drugs with huge trade margins in about 20% cases as can be seen in the Table 'A'.

(c) In most of the cases of scheduled and nonscheduled drugs under formal monitoring of NPPA, the hospital purchase prices are invariably often lower than the 'prices to stockists' (PTS) offered by the manufactures in retail chain except for a few exceptions. This explains the variation in prices of drugs in open market and the retail shops and the hospitals and the truth behind various 'concessions'

offered by retailers and in some cases even private hospitals on the overall bill as part of its 'charity'.

(d) Apart from non-scheduled drugs, the charges on consumables is one tenth of the total bills and more than two times of the expenditure on scheduled (essential) drugs. These consumables are not under any kind of price control or monitoring of MRPs since these are not even listed as 'drugs' under Drugs & Cosmetics Act. NPPA can neither monitor the MRPs nor bring these disposables under price control even in public interest under extraordinary conditions.

(e) Diagnostics services constitute more than 15% of the total cost. In random checks by NPPA, the charges were invariably found to be higher than diagnostics facilities provided by other independently run private centers. Diagnostics services along with all other charges by hospitals are beyond the purview of NPPA and the Central Government and can be regulated only through State specific laws whether through adoption of central model 'Clinical Establishment Act, 2010 and corresponding Rules' or otherwise through its own specific legislation by State Governments which is already in existence in every State requiring enabling statutory provisions

(f) The profit margins in the non-scheduled devices used in the three cases (syringes, cannula and catheters) are exorbitant and clearly a case of unethical profiteering in a failed market system. On being brought to notice by NPPA, some manufacturers are said to have brought down prices on their own while a small group of manufacturers are said to be resisting the self-regulation and have requested NPPA for its intervention in rationalizing the trade margins so that it is compulsorily complied by all. NPPA is closely monitoring the developments.

(g) The total expenditure on drugs and devices and diagnostics is substantially high (46%) and does not make part of the publicized 'estimate' or 'package' (in case of implants) by the hospitals in comparison to "procedures" (11.42%), room rent (11.61%) etc. which are the more visible components. In all these cases, the patients have complained that the initial estimate of expenditure got inflated by 3-4 times. In one case the hospital had not billed the relatives of the deceased under extraordinary circumstances.

(h) Most of the drugs, devices and disposables were used and sold by the hospitals from their own in-house pharmacies and the patients were given no choice or

opportunity to procure these articles from outside the hospitals where prices are supposed to be lower in most cases because of some 'discounts'.

(i) Last but not the least, the major beneficiaries of profits in all these cases because of inflated MRPs have been hospitals rather than drugs and devices' manufacturers. The violation of ceiling price and corresponding MRPs is detected only in very few cases which shall be pursued further by NPPA for recovering the overcharging amounts from defaulters.
